

The Andersons Unload Facility- Champaign, IL

The advanced design and construction of the Four-Fold door make it a perfect solution for grain facilities. They are dependable, fast, low maintenance and provide a superior performance.

SPEED

- Doors up to 16' wide open in under 7 seconds
- Reduces wait time
- High speed especially important at facilities with dust control systems

Performance

- Functions under high cycle and severe conditions such as weather and excessive dust
- Designed and tested for over 1 million cycles
- Horizontal Movement
- Easy manual operation
- Minimal maintenance
- High security
- Energy efficient

Four-Fold Door System

SOLID CONSTRUCTION

Co-Op Elevator-Ruth, MI

The superior construction of the Four-Fold door system means it is built to last. The door panels are made from 14-gauge structural steel tube and sheeting and heavy duty hinges are used.

Co-Op Elevator-Ruth, MI

The Four-Fold door moves horizontally rather than vertically, letting the driver know the precise second the doorway is clear to exit. This allows a vehicle to pass thru more quickly and safely.

HORIZONTAL MOVEMENT
