

CASE STUDY

Durulite Industrial HD

Delivering Precision and Responsiveness for a Major Manufacturing Facility in Lindon, Utah

OVERVIEW

A large-scale addition to an existing manufacturing facility required a comprehensive package of durable, high performance Durulite® Industrial - Extreme Rotomolded HD doors.

The project demanded tight coordination, accurate specifications, and timely delivery to keep construction on schedule.

CHALLENGE

During the planning and procurement stages, the general contractor communicated to the distributor that all required Durulite® doors for the facility expansion were 7/0 in height.

As the project progressed, it became clear that the actual specification should have been 8/0 doors to meet the facility's operational and compliance requirements.

This incorrect initial specification created a significant coordination challenge: the ordered doors no longer aligned with the project's needs, installation schedules were jeopardized, and corrective action was required to prevent delays and additional downstream impacts.

SOLUTION

✓ Highlighting Production Agility

Senneca's ability to rapidly adapt to changing project requirements played a critical role in resolving the specification discrepancy.

Once the need for 8/0 doors was identified, the production team quickly reallocated resources, adjusted manufacturing schedules, and prioritized the revised order without compromising quality or disrupting other commitments.

This agility enabled Senneca to turn around the replacement doors in an exceptionally short time frame, demonstrating the company's strength in flexible manufacturing, responsive operations, and customer-focused execution

THE RESULTS

The correct 8/0 Durulite® doors were delivered without disrupting the construction timeline.

The timely turnaround minimized project delays, maintained workflow continuity, and reinforced confidence across all parties involved.

As a result, the distributor, general contractor, and end customer were all satisfied with the efficient resolution and the high level of support provided throughout the process.
