

A Division of Systems, LLC

McGuire manufactures a complete line of loading dock equipment including hydraulic, air-powered and mechanical levelers, edge-of-docks, portable steel yard ramps, safety vehicle restraints, seals, shelters and accessories. You can completely outfit your entire loading dock area with McGuire's comprehensive line of loading dock equipment.

LOADING DOCK LEVELERS

HYDRAULIC DOCK LEVELERS

Hydraulic dock levelers are push-button activated for a smooth, consistent operation. They utilize fully powered raise and lip extension functions with hydraulic cylinders. With the lowest cost of ownership, McGuire hydraulic levelers are also the safest loading dock choice, as these levelers contain in-line velocity fuses to prevent free fall in a truck pull-out situation.

AVAILABLE MODELS

- Autodok® H Series
- HP Series

AIR-POWERED DOCK LEVELERS

Air-powered dock levelers are an economical alternative to hydraulic levelers, but are still operated with a push-button activation for ease of use. They have a mid-range capacity with an air bag or bellows system used to raise and lower the deck. The CentraAir uses compressed air and doesn't require any electricity in the dock pit.

AVAILABLE MODELS

- CentraAir Series
- MA Series

MECHANICAL DOCK LEVELERS

McGuire's mechanical dock leveler is an economical solution for basic applications, while still providing strength and durability. This leveler uses a pull chain activation to raise the deck. The operator then simply walks the deck back down to the bed of a trailer or to a stored position.

AVAILABLE MODELS

- MP Series

EDGE-OF-DOCK LEVELERS

Edge-of-dock levelers are a great solution for select applications. They mount directly to the dock face and provide a recommended working range of +/-3" and a maximum operating range of +/-5" above or below dock. The units are offered with either mechanical or hydraulic operation.

AVAILABLE MODELS

- HED Hydraulic Series
- MEDLF Mechanical Series

VERTICAL STORING DOCK LEVELERS

Vertical storing dock levelers are hydraulically operated and offer unmatched environmental control for customers with food storage or temperature sensitive applications. By storing in the vertical position, the VSH Series allows the overhead door to form a perfect seal to the pit floor. VSH Series levelers also offer improved cleanliness, overhead door protection, increased security, improved productivity, and easy maintenance.

VEHICLE RESTRAINTS

HOLD-TITE® SERIES

The Hold-Tite is a non-impact, self-aligning, hydraulic vehicle restraint that is mounted to the drive or dock face and is push-button operated.

SAFETY FEATURES

- Actively seeks and secures a trailer's Rear Impact Guard (RIG).
- Maintains a positive hydraulic hold of the RIG for zero running room.
- LED 3-light system for advanced communication between the truck driver and dock attendant.

TPR UNILOCK® SERIES

An upgrade from the standard TPR, the UniLock provides an advanced cam design that rotates the hook away from the trailer's Rear Impact Guard (RIG) to release "RIG Wedge" pressure.

SAFETY FEATURES

- Locking mechanism to prevent the restraint from disengaging the trailer's RIG when pressure is applied.
- Universally effective on any obstructed RIG, including intermodal trailers with a cover plate.
- LED 3-light system for advanced communication between the truck driver and dock attendant.

TPR® SERIES

The TPR is a push-button operated, trailer-positioned vehicle restraint that is mounted to the face of the dock and utilizes a rotating hook to secure the trailer's Rear Impact Guard (RIG).

SAFETY FEATURES

- Unit automatically positions itself when lowered by the trailer's RIG.
- Motor and gears keep hook continuously engaged with the trailer's RIG.
- LED 3-light system for advanced communication between the truck driver and dock attendant.

STOP-TITE® SERIES - AUTOMATIC

The Stop-Tite Automatic is a non-impact, hydraulic vehicle restraint that is mounted to the drive or dock face and is push-button operated.

SAFETY FEATURES

- Low profile, non-impact design
- Hydraulic operation to vertically raise the restraint and engage the RIG.
- LED 3-light system for advanced communication between the truck driver and dock attendant.

STOP-TITE® SERIES - MANUAL

The Stop-Tite Manual is a non-impact, manually operated vehicle restraint that is mounted to the drive or dock face and is manually operated.

SAFETY FEATURES

- Economical solution for a vehicle restraint.
- Low profile, non-impact design.
- RIG sensor bar on the Auto and MAL to notify the operator if the restraint is not engaged with the trailer's Rear Impact Guard.
- LED light communication available with the MML and MAL.

ACCESSORIES

PORTABLE STEEL YARD RAMP

The Yard Ramp provides a smooth way for traffic to move from the ground to the dock level or back of a truck. The 18" industrial solid rubber tires allow for easy movement of the ramp around the shipping yard to be ready in minutes for loading/unloading. The hydraulic adjustment system permits a fast, reliable height adjustment of the yard ramp with virtually any trailer bed height.

FEATURES

- Heavy duty formed steel side girders fully welded to high strength steel joists.
- Tow clamp for easy transportation of the ramp over longer distances.
- High visibility 8" yellow run-off guards.

DOCK SEALS AND SHELTERS

McGuire offers a complete line of dock seals and shelters that are custom designed to fit your building opening and the trucks you will be servicing. Dock seals and shelters save energy dollars while providing bug and rodent protection at the loading dock area during material handling operations.

AVAILABLE SEALS

- TS101 Seal with Fixed Head Pad
- TS103 Seal with Head Curtain
- TS500 Seal with Adjustable Head

AVAILABLE SHELTERS

- TC400 Rigid Wood Frame Shelter
- TC300 Flexible Steel Frame Shelter
- TC900 Soft Sided Shelter
- TC1000 Weather Sentry Shelter

LIGHT COMMUNICATION SYSTEM

The Light Communication System (LCS) is a simple, reliable, and cost effective lighting system. The LCS establishes a clear line of communication between truck drivers and dock personnel, thereby reducing the risk of accidents at the loading dock.

The system uses flashing red and green lights to inform truck drivers and forklift operators of the status of the loading or unloading operation. The LCS comes in both manual or automatic models.

SAFETY BARRIERS

McGuire's **Barrier Lip** extends 5" to 7" above the cross traffic position and prevents forklift trucks from driving over the dock edge. The Barrier Lip is usable anytime the leveler is in the cross traffic position and offers a smooth transition between the platform and lip.

McGuire's **Bar-Lift Barrier** prevents forklift trucks from driving over the dock edge, as well as protects the overhead door from damage. Its hydraulic operation provides years of trouble-free service for use with both mechanical and hydraulic dock levelers. The Bar-Lift Barrier can also be installed on docks without levelers.

ACCESSORIES

The Allied Solutions division of McGuire provides all of the additional items required at your loading dock.

Dock accessories from Allied Solutions can help you improve your loading dock's efficiency and productivity with its comprehensive line of aftermarket products. These products will protect your employees from dock-related accidents and enhance your loading dock communication and safety. Our products are designed to reduce damage and increase productivity at the loading dock.
