

Night Shade Covers

Night Shades cover open cooler and freezer cases during hours when the cases are not in use to trap chilled air in and reduce energy consumption and cost. Covers also help to reduce spoilage during power outages.

Available in clear or opaque white PVC, Night Shades are 48" wide and can be extended to 72" in length. Shades can be installed vertically or horizontally and they easily fold out of the way and store on the top of the unit.

Curtron also offers the Caser, consisting of clear PVC strips that retain cold within chilled display cases while still allowing visibility and unrestricted customer access.
