Appreciation for our partners in this work!

Family Recovery Perspective

Angela Morton

Person with lived experience

Importance of support for families of loved ones **in or seeking** recovery

Estimated 20-23 million people in recovery in the US

Compassionate conversations with (and about) substance use –

- Reduce stigma and foster acceptance
- Supporting and meeting people where they are

CRS/CFRS – free certification classes

“Substance Use Services in Crawford County”

Jack Harkless, MPA

Crawford County Drug and Alcohol Exec. Commission

Treatment: Individual and Group outpatient and intensive outpatient (IOP)

Case Management: Non-treatment needs such as housing, benefits, childcare, etc.

Recovery Support: Individual and Family support

Prevention: In-school programs, community outreach/education, harm reduction

County Resources and Partners

The background features a series of concentric circles that create a tunnel-like effect, receding towards the right. The color palette is a gradient from a muted blue on the left to a light green on the right, with the circles themselves being slightly lighter and more saturated than the background. The word "Updates" is centered in the middle of the composition.

Updates

Education (all grants) 9/7/23 - 2/29/24

- **Quick Facts**

- Total # sessions: 25
- Total # attendees: 600

 - Condoms: 70
- Education
 - Please check the web-series and share out – a lot of good things are happening
- Sober Social Events
 - Planning Pending

Probably an underestimate

Outreach: Individuals Experiencing Re-Entry

“The 18 included studies were all published in 2001 or later. Four associations between incarceration history and OD were identified:

- (1) six studies assessed incarceration history as a risk factor for OD and four found a significantly higher risk of OD among individuals with a history of incarceration compared to those without;
- (2) nine studies examined the rate of OD compared to the general population: eight found a significantly higher risk of fatal OD among those with a history of incarceration and three documented the highest risk of death immediately following release;
- (3) six studies found demographic, substance use and mental health, and incarceration-related risk factors for OD among formerly incarcerated individuals; and
- (4) four studies assessed the proportion of deaths due to OD and found a range from 5% to 57% among formerly incarcerated individuals.”

Outreach: Individuals who are LGBTQ+

2020 data by self-report survey

- 41.3% of LGB adults used marijuana compared to 18.7% of the general adult population
- 6.7% of LGB adults misused opioids in the past year compared to 3.6% of the general adult population
- 21.8% of LGB adults had an alcohol use disorder in the past year, compared to 11.0% of the general population

Risk of Overdose

No “T” in the survey
